

Audubon New York Petition

August 30, 2014

Attached please find a Microsoft Excel file (.xls format) containing 529 individual comments of Audubon New York members supporting Plan 2014. We ask that you withhold the personal addresses of our supporters from the public record. I tried to upload this on the IJC website, but was having difficulty.

Many people submitted personalized comments, which you will find in the "Personalized Comments" tab of the spreadsheet, but most signed on to the general comments below:

I stand with Audubon New York in strongly supporting Plan 2014, and I urge the IJC to ensure it is swiftly implemented.

Over four million New Yorkers, and thirty million people nationwide, depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline.

I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure – as we observed with Hurricane Sandy downstate.

This plan will have long term benefits for the health of the Lake and River, and I strongly support this balanced approach to water level regulation. Thank you for consideration of my support of Plan 2014.

Thank you for consideration of the 529 comments of our members, and if you have any questions regarding the comments raised, or prefer to receive them in a different format please do not hesitate to contact me.

Sincerely,

Sean Mahar
Director of Government Relations
and Communications
Audubon New York

8/28/2013 16:23

My daughter is the sixth generation of my family to grow up in, on and around Lake Ontario. In my 36 years I have seen zebra mussels, gobi fish and cormorants invade and disrupt the balance of this beautiful place. I hope our family waters will forever be healthy and pristine! Please do everything in your power to protect Lake Ontario. On behalf of my daughter and her granddaughters, thank you. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower

production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. ----this is such an important step to be taking - let's please show the rest of the country what doing the right thing looks like! Thank you,

Suzie Elliott
New York, NY

8/26/2013 15:28

We know so much more about the interrelatedness of all life than we did 50 years ago. Let's strive to undo the damage that has been done to so much of our natural environment while we still can. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the

populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Wallace Elton
Saratoga Springs, NY

8/26/2013 12:44

I was born in Oswego on Lake Ontario and spent most of my youth just 10 miles from the shore farther west, making frequent trips to a state park on the lake. I have been dismayed over the years by the degradation of water quality and coastal wetlands. As a nature enthusiast, I know that more than 300 different bird species call the Great Lakes their home, but due to many factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline today. Therefore, it is exciting to see efforts that bring a better balance among the numerous benefits provided by the lake and the St. Lawrence River and help restore ecological health while helping the regional economy and protect coastal communities. For that reason, I support Plan 2014, which reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the lake and river shoreline.

cary fassler

Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. MY WIFE and I are in the process of conserving our nearly 1000 acres in the Lake Ontario's watershed (in eastern Oswego Co.) In part we're doing this to help keep the Lake's water from deteriorating further. WE hope that governments will do their part in keeping the lake viable for both wildlife and humans. We don't want the effort that we are doing to conserve our property via conservation easement to be in vain. Sincerely, Cary Fassler & Deborah Kahkejian.

Helen Fullem
Spring Valley, NY

These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. The Hackensack River, a major wetlands flyway for all types of birds, has been reclaimed. The St. Lawrence can do it too!

Sandra Glantz
Pittsford, NY

8/26/2013 20:06

Lake water is so key to the great things of life in the Rochester, NY area - wildlife, boating and fishing, lots of fresh water. We need to preserve the water and continue to work to improve its quality over the next 30 years. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

John Gluth
Brentwood, NY

8/26/2013 11:20

Over 30 million people--four million of them New Yorkers--depend on the Great Lakes for drinking water, recreation, health, and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. So it is essential that these factors be addressed. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Jane Goebel
Melville, NY

8/27/2013 7:20

New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I greatly support Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Jason Goldsmith
Hudson Falls, NY

8/27/2013 16:24

More than 4 million New Yorkers and millions more nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I'm glad to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure.

Jay Greenberg
Rochester, NY

8/26/2013 11:39

As a birder and conservationist, I'd like to reiterate my past support for the water level regulation plan that is the best hope for restoring the Lake Ontario ecosystem. During my 13 seasons of doing Marsh Monitoring as a volunteer for Bird Studies Canada, I witnessed a swift and severe decline in a number of marsh bird species in the Rochester embayment. These included Black Terns, Common Moorhens, Sora, and Virginia rails. I attribute this to the area becoming choked with cattails due to lack of natural fluctuations in the water level, and also, to invasive species such as Mute Swans.

Randi Hoffmann
Ardsley, NY

8/26/2013 16:43

Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. Our wetlands are so important, and the health of our ecosystem is of paramount interest, not only to me but all 5 of my adult children, and to the next generations. Please support Plan 2014.

Deborah Kahkejian
Williamstown, NY

8/26/2013 18:43

Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. Please help us keep our waterways healthy now and for future generations. My husband and I are putting a conservation land easement on our 970 acre property in Oswego County so it can stay mostly undeveloped. We want future generations to enjoy nature and keep healthy ecosystems. Thank you for your support.

Scott Korman
Great Neck, NY

8/26/2013 23:10

Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their

home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are absolutely critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

William Lee
Niskayuna, NY

8/28/2013 10:59

I have regularly birded many locations along the eastern and southern shores of the lake from Niagara to Jefferson Counties and, in past years, have led several weekend birding trips for Hudson Mohawk Bird Club in fall, winter and spring seasons. These trips require lodging, meals, and other travel related expenditures by the group and occur in the off season, and, thus, complement the usual Summer tourist/travel season. Water levels are crucial to breeding species of interest to birders. More than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Lika L. Levi
Scarsdale, NY

8/26/2013 16:04

I support this plan and hope many others like it will be planned soon all over the States and the world. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. Sean Mahar
Troy, NY

8/30/2013 9:43

For the majority of my career, I have been working to change the water level regulation on Lake Ontario and the St. Lawrence River to be more environmentally beneficial to the system. I sincerely thank the IJC for advancing Plan 2014, which is truly a well thought out, modern day balanced approach to managing the water levels in the Lake and River. Not only does this plan reverse the decades of decline we've observed in the region, it ensures that the state and federal funds that have been invested in restoring Lake Ontario and the St. Lawrence River will not be wasted. I and my colleagues have been working hard to ensure the Great Lakes Restoration Initiative dollars are spent in our region to maximum benefit. Without a water level plan that mimics the natural flows and fluctuations of water levels in the lake, the numerous wetland restoration projects will not be successful long term, essentially washing these vital funds out the seaway. By working with nature, instead of trying to control it, we create a healthier, more resilient coastline and ecosystem in the Lake and River. These natural processes have shaped the dunes, beaches and wetlands to be able to more effectively withstand and abate coastal flooding, provide essential habitat for a vast array of wildlife species, and provide a myriad of other economically important community benefits. That is why Plan 2014, with it's return to natural cycles, is the right plan at the right time for the region.

Carol Marchetti
Rochester, NY

8/28/2013 9:48

As a lifelong New York State resident who has enjoyed the beauty and leisure activities afforded by Lake Ontario and the St Lawrence River, I am pleased to see Plan 2014 put forth. This plan will restore the

natural water cycles that are essential to wetland habitats and the species that depend on them for survival.

Dasha Marshall
East Aurora, NY

8/26/2013 12:00

We must act now to rebuild the health of our natural resources. Please ensure the plan goes into effect quickly and retains our investment to ensure its success. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Laura McCarthy
Albany, NY

8/26/2013 11:43

This region is near and dear to my heart. Having grown up near Lake Ontario, camped in the 1000 islands as a small child, and attended college in St. Lawrence County, I'd like nothing more than to see a healthy water regulation plan that attempts to return the Lake and River to a more natural cycle. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Karen McKeon
Whitesboro, NY

8/26/2013 15:19

I personally support Plan 2014 an hope that it will put in place as soon as possible.

Deidre Moderacki
New York, NY

8/26/2013 14:56

Climate change is making it very clear that we need to be more focused on our environment. Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Gloria Morris

These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. I love to read about government officials working across borders towards a common goal. These artificial borders spend too much time alienating populations from each other. Collaboration like this may seem like small steps. But only with small steps does a person learn to run eventually. Hopefully the IJC can serve as a shining example to other government agencies.

Frank Perretta
Clinton, NY

8/26/2013 10:54

I live near Lake Ontario and would support any effort to improve the quality of the lake and the wildlife that call it home. I realize how many people depend on this precious water source. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Dorothy Rapp
Alexander, NY

8/28/2013 16:22

Millions of New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation and not least of all - our health. Not only us, but more than 300 different bird species call the Great Lakes home. Due especially to the loss and degradation of coastal wetland habitat, many of these species are in serious decline. Apart from these human and humanitarian concerns, the economy of the Great Lakes is seriously impacted by water levels - recreational boating, shipping, fishing, hydropower production, and ecotourism on both Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy every year. Plan 2014 - PLEASE - implement it. The plan reverses decades of environmental degradation. It restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. THESE NATURAL FEATURES ARE CRITICAL FOR PROTECTING COASTAL COMMUNITIES AND INFRASTRUCTURE - WE'VE SEEN THIS - HURRICANE SANDY ----- a major wake-up call !!!!!!!!!!!

Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses

the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. It is time that we update the Ontario lake water level maintenance plan after all these years. The wetlands are in very dire state and it needs our immediate attention.

Plan 2014 would reverse environmental degradation of many decades in the Lake Ontario/St. Lawrence region. It would bring back natural cycles of low and high water levels that create and re-shape beaches, dunes, and wetlands along the coasts. In turn the natural shoreline features make for healthy habitats for shorebirds and other wildlife while offering important protection for human communities.

Anne Stegemeyer
New York, NY

The Great Lakes must be protected with robust and enforceable safeguards. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am encouraged to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Sheila Swigert
Staten Island, NY

8/26/2013 11:00

As someone who grew up in the Lake Ontario area, I am concerned that the natural cycle that I well remember has been changed over the years. Hopefully Plan 2014 will restore the natural cycle that shaped the coast of that great lake. Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy.

Over four million New Yorkers and 30 million people nationwide depend on the Great Lakes for drinking water, recreation, health and overall quality of life. Recreational boating, shipping, fishing, hydropower production, and ecotourism on Lake Ontario and the St. Lawrence River bring in billions of dollars to the regional economy each year. In addition, more than 300 different bird species call the Great Lakes their home, but due to a host of factors, especially the loss and degradation of coastal wetland habitat, the populations of many of these species are in serious decline. I am pleased to see that Plan 2014 reverses the decades of environmental degradation in the region and restores the natural cycles of low and high water levels that have shaped the beaches, dunes, and wetlands of the Lake and River's coastline. These natural features are critical to the protection of our coastal communities and infrastructure, as we observed downstate with Hurricane Sandy. I support the new water level regulations for the St. Lawrence River. We must do whatever we can to protect habitats and help to restore the Black Tern and other wetland birds to full health, while ensuring their future security and safety.
