RECEIVED  
SEP 06 2013  
BY: *[Signature]*

Dear IJC,

I submit these letters and Petitions in support of Plan 2014.

I wrote an Op Ed that was published in the Buffalo News, August 26 that is also in support of Plan 2014:

<http://www.buffalonews.com/opinion/another-voice/wetlands-determine-the-health-of-a-body-of-water-20130826>

I would appreciate acknowledgement of this submission to demonstrate your receipt of it to the Sierra Club, Niagara Group Members. You can send it to: [Arthurklein@mac.com](mailto:Arthurklein@mac.com).

I would also appreciate any further decisions and information on Plan 2014 or any regulation of the Lake Levels in the Great Lakes.

Thank You,

Arthur Klein (716-693-1082)  
43 Luksin Dr  
Tonawanda, NY 14150

**International Joint Commission:**

I write to express my strong support for Plan 2014 and call for the full and speedy adoption of this a new approach to water level regulation in Lake Ontario and the St. Lawrence River.

Lake Ontario and the St. Lawrence River enhance the quality of life for all citizens who live, work and recreate in the coastal zones of the lake and river. This new plan will contribute to the economic, environmental, and social sustainability of the Lake Ontario and St. Lawrence system.

The benefits of Plan 2014 are not limited to the environment – recreational boating, hunting, fishing, low-cost and low-emission hydroelectric production, and cost-effective shipping all are strengthened under this new approach to regulation. Plan 2014 continues to provide considerable protection for coastal property as well.

Scientific research conducted under the auspices of the IJC's five-year Lake Ontario-St. Lawrence River (LOSL) study clearly establishes many environmental benefits of the plan. More natural rhythms of levels and flows will benefit migrating and nesting waterfowl, key wetland habitats, beaches and dunes, and "canary-in-the-coal-mine" species like the northern pike. The case for Plan 2014 is further strengthened by a growing global body of scientific literature on the consequences of regulating rivers and lakes, and on the benefits of restoring more natural flows.

The scientific research conducted under the LOSL study also highlights the negative impacts on the ecosystem that have resulted from 50 years of regulation under Plan 1958DD. This plan, which was developed during an era when adequate scientific understanding of Great Lakes- St. Lawrence system was far less developed, has altered the long-term rhythms of levels and flows in the Lake and River that are fundamental to shaping and maintaining coastal habitats and plant and animal species, and the cultural, recreational and economic benefits these habitats and species provide.

Again, I strongly support this new approach to water level regulation in Lake Ontario and the St. Lawrence River.

Sincerely:

Angela Koisley

# Petition to the International Joint Commission (IJC)

We the People, Concerned Citizens of the Great Lakes Basin, do hereby urge the Commission to adopt Lake Ontario-St. Lawrence River Plan 2014 (Plan 2014) to enhance the environment in Lake Ontario and the upper St. Lawrence River. We support a plan to restore the Near Shore and Wetland areas to Greater Diversity and Vitality.

(You will not be contacted as a result of your participation. This information is to validate the petition.)

# Petition to the International Joint Commission (IJC)

We the People, Concerned Citizens of the Great Lakes Basin do hereby urge the Commission to restore the vitality and integrity of Lake Ontario and adopt Lake Ontario-St. Lawrence River Plan 2014 (Plan 2014) to enhance the environment on Lake Ontario and upper St. Lawrence River.

We understand the plan will restore the Near Shore and Wetland areas to Greater Diversity than earlier regulated levels.
