

Sender: North Dakota State Senator Tim Mathern

Subject: Red River nutrient concentration

Message:

February 26, 2020

Commission,

I support the International Red River Board recommendation to add nutrient concentration and load to the list of water quality objectives for the Red River at the boundary between the United States and Canada. This will not only benefit Canada as it will create and support more earth friendly practices in North Dakota for all waters.

Senator Tim Mathern
