## 

The Treaby botween His Najesty the Jing of the Dutbed Kinguom
of Great Britain and Ireland and of the Dominions beyond the Seas, Braror of India, diated the 21 th of Jamary, 1909, relating to boundary paters and to guactionc arising along the boundery betwen ancode and the thited

Stetes contains the folloring Axticlo:
"The 日i, Contracting Parties agree that the st Lary and Hille Rivers and their tributaries (in the state of kontand and the Provinces of Albeqta and Sasiatohewan) are to be treated as ons stream for tho purposes of imigetion and power, and the waters thereof shall be apportioned equelisy between the two countries, but in moling such aqual apportionment more then hale may be tacen from one river and leas than hole frow the other by either country so as to afford a more bencficial use to each. It is Aurther agreod that in the division of guch waters harize the irrigation season, betweon the first of fipril and 3let of Optober, inclusive, smmally, the United titates is entitlod to a mior aprronciation of 500 cubic feet per eecond of the wasors of the Milar ziver, or so manch of suin amount as constitutes threo-formo ol its nitural flow, and that cenoda is entitled to a prior appropriation of 500 aubic reet por second of the flou of st Wary River, or so anoh of whem anount es constitutee threomiourths of Sts nitural rlow.

 througi Cenalisn territory, of waters diverted fiom the it wary Eivar. rive provisions of titlole II of this treaty shall apily to any injury resuiting to proverty in canada from the converance of such Futers tirough the inile tiver.

Tha messupemant and anportionment of tha weter to be used by anch country shell from time to time be medo jointiy by the properig constituted reclamation oficicers of the Duited statom and the properly constituted irrigetion ofticers of His Wujesty undex the direction of the International Joint Commiseion."

Whis freaty was apmoved of and rathied by the Prealdent and anate of the Unitod gtates and the Parlianext of Conada in me comase, man all necossary legisletion has been enacted and ptons telken by the two countries tor the prapose of outting the same into operation and making it opfeotive.
 Weters of these atreams for the purpose of ixrigation, foi been tho gubjact of conciderotion by and diplomatio comresponconce between the Vntioa statea and Gaman for som Jeaps prior to the Mreaty, ma Axtiola TI, wheh has beon aptly toseribod as a marty whin maecty ombodes tho complete recort of tho settlemont arrived at with peference to those waterg, and it will be unnecossary for the murposes of thas roport to refer to any othar artioles or wovistions of the Preaty.

When the Comission poceoded to discharge the dutios ansignod to it wher the intiole in auestion it discovered thet a diferenoe of opinton oxisted betmean the remesentatives of the two countried as to tho watore to be measurga and apportionod the United gtates contending that the Whters described in said Anticle, vis: "the St wary and Hilk Tivers and their tributaries (in the State of Montan and the Frovinces of Alberta and Sasimtehemant inclutod only the St mary end hily pirew and such of thelr tributaries es elowed waross the international bowndary elther as indepenient streams or part of the mon rivers, whoreas cencede contended bhet the wetery subjact to tho 7 reatg and describod by the lamgage guoted, were the waters 0 ot 211 of the tro rivers and all of their unitutarias.

All perties intorestea appoered before the commission in tho oity
 facts becwing unon the subject wore megented hy tho oxsicess of the two
 peivate partios interasted ware remresanted by comsel.

At the request of Commeel for the United gtates Zealametion Service the matter wes reargued at the oity of betroit on the 15 th pand 16th of hay, 1917.

Before a deelsion wes revdered by the Commission two vacanaies docurred on the Comission, one on the Candian Soction and one on the United States Seotion. When these vacancies ware 211 led it was demed proper that the cose chould be agein argued bafore the whole Comaisston an reoonstituted. This further arsument took place at 0ttawa on the wa, 4th and 5th of tiay, 1920.

By Article VIII of the preaty it is provided that in aese the Comicsion is ovenly dirised upon any question or matter prosented to it for dactsion, separate reporte ehall be medo by the Comatostonere on oach side to their own Governments. In this acse the Comentelon is evenily divided, and this report is made to the Ganclian Goveranceat by the Canadian section parsuant to the Artiole above mentioned.

## Doscribtion of the stars

Whe st Rary River rises on the eastorn slowe of the min range of the Rocky Mountains in a region of parpetual snow and loe. it flows
 in a northerly direction orossing the International bowary into the frovirce of Alberta abont 13 miles from the leins above mentioned, subsequantiy aptyins into the Belly cirer, and inally findine ite way into Hudson Bay as part of the waters of the asamtohowan aiver. Whis river

History of Survays mado by the Otnadion govormaent in 1894 and subsequent geass denomstreted tha possibility of 1rwigatind consicerable lami
 Ganada requesting the British Ambassador st wasifugton to inform the Governmas of the Unitea States that the Cenedian Goyerment would be elad to cooparate mith the authoritiles of the United States and Mexico with the object of regulating the wse, tor parposen of invigation, of the watere of streame which hate the origin in one of tho coveries named and subsequently flow through the territory of anothery

The reply of the Secretery of state of the Duitea states to this commuication, deted the 27th of warch, 1695, and transmitted through the Brition Ambisector set forth that he did not lact interest in the important subject, but that he was pnoble to exvo exuresion to the views of his Goverment.

By Order-in-Council of Gannde dited the 21st of September, 1897, a reservation of 500 mecona feet from 10 water, and 1000 second feet of high water, was made to safegrame the future cevelopment of that country by manns of irrigetion.

On the 3let of Jamery, 1899, tho Alberte Irfigetiom Company of which the A1berta Rellway and Irrigetion Compeny is the legn successor, applied in duo form znder the zovisions of the Irxigation at of canad to divert from the gt Naxy fiver the fotal low weter flow available from that stream and a fur ther quentity during the hig water stage surficiant to maie 2000 cuble feet per second during thet stage, the water to he used on a tragt of 500,000 aces of land described in the applicetion.

On Hey 3rd,1899, authorkzation was grated to the comrany for the oonstruetion of its mortes, end a poriod of ten yoars grentod for the completion of the same. As the Gomazy's plans covelowod additionsl aplloations mere
nade for water from ofher sources, and inizily on the $83 x d$ of october, 1902, an amomdad monorisi and plane were filed comyising all of thase proviously sumaitted, and authorization for construction of worke as show in amonded sppliostion wes eratod, and a poriod of firteon yoars fixed fow the completion of the undertricing. Inoluded in thas axthorization were 500 second reet of low and 1500 second foet of high woter of the Milk Hiver. Resbamble diligema has been displuke by the company in the construation of its moxks and it has coriplled with all the requiroments of the lew necoscary to mintain fts rights in good standing, and a very large sum of money has ben arpendod on the undertakinge

This comzeny, the stock of whien is now owned by the Canalan Pacific Railvay Oompary is ansious to dovelop ite irriqution zojocts so far as it is posaible for $i t$ so to do vith the water availatole for it under the rroaty.

In 1904 the Alderta Rallway and Irrigetion Company built a
 / $\mathrm{m}, \mathrm{H}$
 utilize it on a part of the came area served by the $g t$ 堆ary River water carried aroma the west oni of the ride.

In 1904 the Daited States Reclemetion Service was given the nocessary authority to carry out an extensive schome for tho irpigation of
 taking over of certain irrigation womss that had been constructoa and were then taking water from the lower Milk atver and its tributaries in Hontama, Thie Service also took steps to ampropiate under the laws of montana any arailable maters of the kilk infer for the purposes of their schemo. This service proceoded wh the construction of worta for the purposes of their schome.

The Reclametion Serrice in the prosecntion of their wark made prelite a plan for the aiversion of water from the st layy River for impigation in the lower valley of the Mille Efter, by turnime the wars of the st wary into the Mink River, mal allowing the tetars to flow dow in the velley of the
 derisea in the belief that it was not femsible to divort tha waters of the Nith River for ixrtgetion purposes in Canda.

Dy Order-in-6ouncil dated 15th October, 1902, tramsmitted throngh the proper diplomatic channols; the Govammant of daasda objeeted to the proposed ifrigetion worits and expessed the hope that the flow of the st Mary Riwer into canda would not be interfered with.

Whe renty of the United states to this protest on the part of Canads is contained in a letter ffom Hr John May, Secretary of state, to the British imbassador, dated February 19th,190s, in whioh the attituda and intentions of the United statos are set forth and regret expressed thast the Cowernment of that country cem soe no reason for a chenge in position taken.

The belief of the Enited gtetes engineers that it was not proaticabla for Geman to divert water from filk kiver in ounda does noto appars to heve been woll foumied. The canal built in the Alberta hailway
 It was physiceliy posaiblo not oniy to darort in Coweda any gt Mary river
 Canada the reters of 1 ilk River itself.

When the situation becema mown to the owners of irrigated landa In the lower valloy of the 14 Lie River they maturally beomemeh concorned and strone rempesentations were made by them to the Jaited states coverunont.

AK a resuit of these representations a protest was lodgod with Camada
 Oanal.

At this stage the attitude of the two Govermpents tevaraf this matter appears to have bean revareed. Up to this time canula had beon weging ugon the Unitrad stater an anicable adjustment of the mattor; and had baen protesting agminst threatened aiversion of watars from the $3 t$ Hary miver, and the United atetes had been tuming aloai acs. How it is the thited Ptates trat mako the protest to onenda aghinst that country's threetenea
 oonsider tha matter.

The repiy to the protest of the Tinted States is contained in an Ordor -in-Counati dated the 8 th of JuIy. 1904. In which it is pointea out that the Conalian Forth Feet Iminetion fompany had been equen aythority to divert 500 cuble roet por second at lon water flow, and 1500 seot during high wator stages of the Milur River.
 dated the $30 t h$ of pecember, 1904, to whith further reference will be mado hereater. In this commonioation He Hey arggests a onference botweon repreantatitea of the two countrie for the prarpose of reabhing an aspement in zespect to the dispocition of the waters of the 410 and $5 t$ Hary rivers.

In reply to $4 y^{\text {Hay*s }}$ comanication an Order-in-Council was passed by the Governuent of Caneds on the 7th of July,1905, askins the unted states Goverment to sugest a plan for the aettleman of all qustions in referenge to the vaters of the st Mary and $141 k$ Mivers that would be accoptable to both mountries.

Wo farthar action apwoars to heve been tadren by either acmutry locking to a settlement of the quostion until the 15 th of June, 1907 , then certain yroposals wese subuitted by tr Root, then searetary of state. to thith furthar reforence will be made hereafter.

3x Root's proposals are dealt with by an ordox-in-coumen of the
 that representatives of the two Govermonts be appointed to consider a besis of afreement wich micht be aumatted to theis respoctive Govermente. In pursuence of the suggestion contained in this prder, wr PeH.Newell wat
 the Goverment of Canede.

After lonc negotiatione and correspondenee between thess representatives and othor acting on behati of the two countries, the reaty was acttled and in due ooverse retifled th the corm quoted at the opentigs of this report.

RAghts of the two somineles gnart from the Prosiz

Before proceeding to a discusstom of the moaning of tha Articlo it is dasireblo to give consideretion to the disuseion that took place bofore the Comission as to the legel rights
of the two countriss with reforence to the waters of the rivers in question.
Whepe is the puthority of an minent writer on international Jaw that the compon law applies to a stream alowing from one aountry into another With all the riegts and incidents to wich riparion omars are entitled under that law, There does not houever appear to be any conclusive authority on the point. But assumine that common lev prixciples do not emply to the asso, and
that the Unitea stater was not ompolled under any male of internotional lam, to paryat the st wary fifer to flow down in its natural oourge into Canda withont dimmition of or interferance with ita flowy and that conada was under no oblicetion to refrain from any action thet might intorfere with the flow in its naturel course and volume of the filt River into the state of 筑ontama, wat pripeiples socording to contty nat fair dealinge between these two highly civilized and friencly natione should govera their sctions In comaction with the use of the watere of these two streame.

The male lald down oy the Unitod Stetes supreme conet in tine cace of pivers flowing from one tate into anothor atete, vere applied the United Stetes at leest could have no cence of complaint. This was the position telron by Secretary of state Hey in his commateation of the 19th of pobruary, 1903 already referred to.

The rule lald down in the case of Kanses \#5 Coloredo, 206 U. 5.45 seems to furnish the best guide we hare. This case relates to ths Arkansas river which plowe throuth the state of Colorado into the gtato of Hansas. Colorado clamed the right to appoyticto all the vaters of this streeng Hamsas insistod that in secotamee with the zinciples of comon law, this river should be pormitted to flow down to that state vithout interference by coloredo. whe court held thet neither contention was correcty that the menefits of the stream should be aquitably apmortioned between the two states. In datemining mat such equitable taporiomant would bs, tho court tocir into concicaration the banelita and adrantages of the use of the sater by the people of ons state, ant the deterrent and disadrantage to the reople of the othar stata causoce by a donivation of water. The goraming minctiple seems to hive becn benficial use.

Applytue the xernetplos hatd dom in this oase to tho st tury and

 gan be rut in that country - aceent at all erouts by aiverting it entirely frow its com tator-shed. No wrioz apyoplations existed in Montana, hile mactically time whole reters of the stream are sujoct to sella neior appropriations under the 2 was of Gansim. It sems that accoratuc to procedent as tell as natural justice, the waters of a wivor an not be aiperted from tis waterahed to the detrimat of lazds within thot watershed. It would tharefore seem that there was no mide of intarnational law, comity or of fale dealing betwoen tro riendly cowatries, now any rule or principle goveraing the aso of weter Plowing through two stated of bhe Unt tod states or otherwice by mion Ganada could be teprived of the use of the wetors of
 except at 2.11 erents with racorenoe to a small and inaignisicaut quentity,

But apart exom watever richts canada was eatitled to in the wetors of the st haxy siver by intematiomal lam, omity, neturai jugtioe or otharwise.
 waters of this rivar without hox consant. Tha cost of carryine tits water to

 Wontana; and if sho sttemptod to to so a cenal hed glroady been oonstructed on the cancian side by which wah watere could be diverted to oenadien 1ande.

The situation 41 th reterenge to the Milu River was to some oxtont the revere of that of the $3 t$ Maxy River. Undar the tule of conron Law Caneda world have been comzelled to perait this rivar to flow bank into Montans at the Dastern Orossing undminishod in quentity and mimpaired in quallty. Under the mule as laid dom in ransas ye Colorado, Montana would havo been ontitled to the preater portion of the wetere of the nain strem. Qreater opportuaties for irriembion exist in tho valleg or this river in Wontane than in camede, and aproxelations existed on this stream in Hontan peior to the apropriations in Ganda, The situstion with peference
 somewhet difforento greet opportanitioz oxist for irrigetion in tho vallogs of these tribntarles, mal their waters have bean applied to benofioial use.

Irrigoide londe in the vallays of these streane also axist in montana and benazioial use is beling mado of vetera from these atroms upon thoce 1mnits.

The nein river hesals in the United States and after flowing 200 miles throug Cenoda again returne to the United States where it receives Lave accretions berove emptying into the hissouri. It would seom that all thece thinge and all other features heving a beering upon the equitable alstribution of the wher of this siver and ito tributariea are proper moterg for consideration mier the doctrine referved to.

Hoanime of Heving treced the history of the Articie in questin, and aresty outiined the facts and arcumstances commeted with the case, wew come to a considaration of the meaning of the
traaty.

The wnomous judement of the Camdlam Section is, that the words of tho Artiele in question ere wores of description, that the waters doscribed are all the paters of the 5 thary and Milk givera and their tributaries in the state of wontan and the Provinoer of alberta and Soskatcherran, and es the two rivers and their tributaries are aituatod Wholly in the State and Provinces namad that the werers subject to the Ireaty comprise all the waters of the rivers in question and all the waters of all their teibutaries.

In this view of the Artiole it is the duty of the commisoion to aireot the groperiy constituted reclamation ofilaere of the United states, and tio groyerly constituted irrigetion officers of His Hajesty to maico the neaesary nocsurements from time to tim of the water in the two wiver sy tems for the prepose of ascertaining the total quantity to be apportionod botwoon the two countries and to malse such measuroments as max be mocessary to deternine the amount of water to wich each cowntry is entitlod to receive at diferent points as its share of the whole measured as aroresaid.

Whe Camadian Section is unable to give elfoct to the oontention of the Unitod states, that the words in parenthesis are mords of limitation and not of deweription, and that the ony tributaries that come within the description of the attiole are those that at one and the same time are in the state of Montaxa and in the Provinces of Aberta and sajontchewan. But this comstruction oven if admitted does not maet the contention of the Unitod 3 tates for only some of the tributarios that that country seetra to bring within the wreaty are situated in the Provinces and state named. But it is Aurther arguad on behale of the Unt tod States that the word "ana" between Alberta and sorstchewan should bo changed to "or", and that the
garanthotical wowd read "in the state of llontade and the Frovinoes of
 Qven if this oonstraction bo adnitted it will not abraee the wheres the Hinted staten cloime aro correce by the zreaty, for that cowntry adrits tiat the tributhries trat flow fnto the man river ow other tributarios berore they aroas the intarnational bounciary, are inoluded, and there are a number of these situated wholly in ono or both of the Provinces named in the istiele.

It is however inther contended on behelf of the united states thet the araft treatiee prepared by and the commuications betweon those amployed in negotiating the settloment 0 the question, presented by Gounsel for the United States et the at Faul hoaring, and admitted to the recond subjoct to objection by Counsel for cernda, whow that the witers intweded to be covered by the Aytiole are only wetors that flow acrose the bowary. Oownsel for Cande claims that the article must be conetrued according to the plain and ordinary mening of the words used, and that there 15 no absurdity, ambigitiv or inconsistency in the language omployed, that would justify the Commission in resorting to extwenoous deamonts or ovidence of any kind in ordor to ascertain the moaning of the Axtiole.

Ith the judgnont of the Gandian section the langumge of the Artiole is cloer and intelilegle on its face, and no justipleation exists under the ordinary rules of evidence for the admission of dosumente or oxtranoons evidonoe to explein or in amy way vory the meaniug of the lancuage used. the proprlety of taking into consideration the documonts submitted to the Comission is rendered still further doubtful by the followine oircumstanees.
2. The dochmonte $5 n$ question are not a complote recosd of all that took place betroen the negotiators. Undoubtealy meng alscussions took plese, and hany stecgostions were mado oreily thet woule be as illuminating as to the Lutextion of the parties as the documats sumaited in ovidanoo, but we have no record od any of these. In faet wo have no evidense that we hrye all the dratts and written nogotiations berore us, but on the contrary the record indicates that we have not. 2. Helther the Goverments nor the Legishatures of the two countries had anything but the Article itseli before them vien they apyroved of and ratified the greaty. If construe the article not as it is mitton in tho Treaty, but in accordonee whith drafts, comrespondonce and other extroneons documents may in effect write a new article instead of construing the only one that is binding upon the two countries, manely the one that has boen smproved of and ratified by thom according to the meaning of the lancuage used in it.

The Canedian Section hovevor feels that no technicel rule of law or evidence ghould bo allowed to zrevent the Cowatesion ascertaining the true moning and intention of the perties as expeseed in the Articie, and for that reason we have cosesuliy considered all the documents in the caste. We co not foel thet these docurents or any proper inferences that can be arawn therefrom in axy way change, altor or affeat the meaning of the Artiale as above set forth. In fact in some respects theso documente negotive any possibility of placing the construation on the articlo contemad for by the united states.

History of nosetiations as dagaribed by documats in rocord

Hz John Hey: Secretary of state fon the thited States first laid down the basis on which the United states proposed to deal with the waters in question in a lattar, bove referred to, to
tho British Ambassedor dated February 19th, 1903; in the rollowing werds:
"In the present cese the intention is cleariy expmessed to arola all interforence with the amount of water to wioh the canadian canal on Milk hiver nay be entitled. The engineer in chare of the work in hontana made a coren 1 investigation of the wiver with a viow to dotemining the anount of water to which claim might monerly be advariced in canada, and it is the intention of the Reclamation service, in its recomsendation to the Intorior Wepartrient concerning this rroject, to melce as full provision for the
 as it would mem if the river were wolly within the boundaries of the united. States and the rights of the citizons of this country only were under consideration.

It is proposed to deal with this metter in strict conformity with the laws conoerning the rights to the use of wator as recognized by the courts of the arid region, both on thie side or the interantional bowndary and on the other. the grinciple may statad in the language of soction 0 of the Reclametion at of Jun 17, 1302 (32 Stat.888):

That the right to use of wator shall be appuxtenant to the leands irrigated and benefieial ues shall be the besis, the mesure, and limit of the atight"。

In this lattor Mr Hay also makes tase of the ge words:
"Inasmuch at the position taken by the Reclamation Service in this natter in regard to the rights claimed in deneds appoars to be precisely that wich is taiken in tho case of similax ifyhts within tho United states. both being treated according to the recognizod rules of law gevorning the divarsion and appopeiatiom of water in arid regions, Nr Hitohcock mogrots that he can see no reason for a change in the position taken oy this Govermant in the mater".

The proposel act forth in wry's lettew as indicated by the extracts
quoted above is that the international boundary shonld be ollminated and the gights of the peoples of the two corntries to the waters in question as in they wore the peoplo of one country, atid the rivers in question all in one country; and to apportion the mater on the besis of beneficial use. this principle
appars to sum through pretticelly all the subsequent correspondence and negotiations. This pximaiple conld not be carried ant without taring into constieration all the mbers of the two rivers, and all the meters of all the taipataries available in either country for the parposes of irrigation.

Another letter Tron Hz Kay to the Bxitieh snibessador dated Novomber 50th,1904, contains this statement:
 Department of the United stetes believe it posaible for the twe coverrments to melse an arrangoment whereby the rigits of the settlars mithin the donain of the tnited States will be preserved ade the sume time the water nocessary to supply tha cannl built by the Gonedian How threst Irrigation Company will be zrovided.

The engivears report thet the veters of the st Harys River wioh flow northward into Oandian tormitory sxe now being utilizad to only a small extent, and they state that it is practicablo to store these waters In the United States, concuct them by a conal on the southern alde of the international boundary line to the head of the milk River, and there turn
 ritar and furnish a supply of water for lands in the Hilk River velley within the Thited sttates. Duder this arrangoment the grior rights of the Candilay sottlexs on the at Harys siver would be protected oy permiting its ordinary flow to continue to pasa into Candien territorg, and at the some time the ereet rolume of flood water which passos dow that river destroying zroparty along its banks wovid be restreined within the United States and diverted to the hoad waters of the hilis River; and be put to beneficial use in the lower Mik River Valley in the United Statesot

In a further letter from Hr Hay the date of mich is not disclosed
Dy record, the folloning language occurs:
"It is proposed by the angineers of the zeclamation sexvice to hold the flood waters in st fory haise, and by so doing turther destruction of property in tanada would be ararted. These illood waters are not of use to the ognajian camal and acn not be utilized, as the opportunities for storase are sitwated in the United States.

It is not groposed to tak axay from the canedian eamal the water noedod, but on the contrary, 生 is mova thest surficient water will zeech this canal to supply its noods".
"By the storage zod divershon of haod waters toom St way hake a large ares of land acgegating wocowing to altemative glans, Erom
 affording homes for soveral thousend pergons and inoreasing property valued to a large extent beyond the meve erea of lande reclaimed. To assert that the waters muat always flow to wate will not only prevent the
 whatever the eay person or parsoms in Canade.

Durimg \#ay, June mit July great quantities of woter peased dery $5 t$ Mery Hiver from the se lover streans, far more than the capedty of the Camaian Oanal."

It would theresore eppoar thet the origimal sugsestion of the United states way, that that country should be permittea to store the alood
 use, and couvey amen through chamel of Mils Biver dom to Hontran's irsigable lands, and that caneda shoula have the totel ordinary fow of this river. The contention of the United states that danadn would mot only lose nothing lig the errengamont. but on the contrary would be greatly bomefited thereby innamoh ms sin would be protected from dumese during his floods.

The arrangoment outlinad by itr hay is more favourable to Canada than the xrofisions of the treaty even on the basis contended for by Ganda. This monld soen to bo on zaswer to the argument sometimes made on bohalf of the United statea that in Comadn's contention ss to the noanise the treaty should prevail, the result would be so wheir to the Gnited Statos as to chow that an interaretation mad boen given to that doomont ditieront to what was intondad by the partles regatiabing the samo.

The nast point Lor considerstion is whet has beon described as the Root Drait Iresty montioned above. It has besn urich discusbed by counsel on both sides as to what the real mening of this drait is. it is admittad by all thot its moming is in som respocts obscure and ita practical epplicetion difficult. The plen proposed in this draft wes not adonted and it is doubtial if ang assistrnoo oan beinod in tho interpetation of the inall treaty by a consideretion of its tomes. The following extracte from this draft are however of interests
"It is hereby agreed between the Governmonits of the onited gtates and Great Britain that the waters of the milititer and the st Mary River and their tributarios suoll be agportioned in perpetulty for use in the two countrias according to the following stipnlatione and agreanents;

1. That for the proposes of thic agroement the gherys River and the lilik Tiver and their tributarles, wich are now separate end independent river syotome, sha 11 be treated as though they were the waterways of a singlo drainage system.
2. That tha weter arallabla for ixrigation from these two river sjetems throughout the priod from karch lst to september 50 th of asch your, both dates inoluded, ahall be apportioned to anoh of the two ountriec from dey to axy in equed wounts.
3. Thet the failuro of either country to fully utilize the richt hereby agreed upon to one-hale of the svailable water during the period specified in paragranh 2 shall not be regarded as adding to or diminishing the rights of the other comatry.
4. That during the poriod of oech year not spocified in paragraph 2 the United 3 tates may alvert or hold back in etorage resorvoirs any portion of the naturel lion of st harys inver, and canda may divert any portion of the natural show of Milk River, in nelther case to interfere with exiuting rights.
5. The mounth of water chargeeble to tech of the countries wader the several itoms anmaretod in paragreph 5 bhall include all the waters of the two fiver systoms thethor need direotiy or indirectiy by the two eoveriments or by private parties in their respective territories.
6. The share of the United States shali in any ovent inolude mo moh of the swallable natural slow of the Miliz Birer as shall be fultolally detormined as hatine been aypliad to benoitaial use on ox bexore movember 1,1905, by the cansl systems tehtne wator Erom tho lower filk kiver in kontena, the same to measured at the intekos of said canal systems; and whenerer one-half of the natural plow of itile shell bo loss then much mont, measured as aforesaid, the share of Gandie shall be aininished so thet enid country shall weceive of the natural flow of the entire Milk fiver system oniy the oxcess, If any, beyong such mannt of ciocrood benericiol use. It is undarstood that the mount of water hereterove diverted for benefletal use
 second when the same was avellable."

It is contended on behalf of the buited stetes that the words In the introductory paragraph, "which flow across the forty-ainth parallel oundary betwen the United Statea and Cansas" govern the whole of the treaty, and that whenaver reforence is mode to water it is conly wator Clowing across the boundary that is ant. It is uxged on the other hand that the words in question simply describe the waters in connoction which the dispate is pracing, and that in the settloment he rroposes for thild dispute, he daals not only with the waters mentioned crossing the bownery, about which the discussion has taken pleos, but outlines a plen embraejng all the waters of these two rivers and all the waters of all their tributeries. It is argued that the wide language contained in neragraph 1 and paraereph 7 above quotod shov concinsively that mo noot ves dealing with all the waters of the two river systans.

It is particularly pointed out thet at this time that the veters
 irrigetion purposes in the lower Hink piver valloy, and that wection 7 specilleally provided that these weters should be a charge against the United States. Whatever force thase arguments may be ontitiod to, one thing sems plain, that wader section 7 provision was mode for the meantoment
of 7aters in the canel system of the United ttates in liontana, ingluding waters of all Hontand tributaries, and thet the greater the flow of the all Montana tributaries la the inteares of the United states conals, in Montens, the lees the United States would be ontitlea to receive from the mein ounmel of the Nifit River st the intometional orossing and the more Canads would be entitied to receive. In other words, tita Nontane tributarlea tused for irrigetion in xontana treng to be taken into
 the arount of waters in these iributaries.

Ar Root"s draft also ampors to dispose of an arampateraised by cornsel on bGhalf of the United States, thet to measure these Lontene trioutar lea for the prarpose of corrating the amount of weter to which canada was entitled of the internetional boumery would be an inraston of the sovereige rights of tha United states that the goverment of that country would not consent to.

$\frac{\text { King is Pirgt }}{\text { Momorandug }}$

In a momorandum datod April 27,1909, addrassed by lat King to Mr Mewell, Ming sets forth the object to be attained in these words "it is thought that an agreement whereby all avallable węter shall be utilized for the conterslon of the present desert wasted to the Pertility of irrigated sields, to the advantage of both countries, is in the very highest decree dearablen, and he points out that in his viow guch an agrement oan best be based on the principle of equal sharing of benefits to be derived from the se international waters; duo regard beire had to existing rights.

Kinetegecond In a momoratum deted fay 1,1908, Hy Hing sets forth Kemorandam
the inst definite wronsel of settloment from Canad,
as follows:
"That the United states shall be entitled to sll the water of gt Haxy River at the dom site of $8 t$ Harye reservoir, for storage during the months of January, Rebrumy, tiarch, forember, and Decomber in ench year.

Thet Canada shall be ontitled to divert yom the naturel flew of st warys River 1,400 cubic feot per seconil during the remining months.

Shat the axcess flow of st Marys River during the last-mentioned period, above 1,400 second-feet, shail be divided equally between the two countries.

What the United States shell be ontitied to nll the water of Milc aiver durins the months of Janrury, Bebruary, March, August, September, Ootober, Rovember and December of onch year.

That conada shall be entitlod to divert from the notaral flow of Iallu fiver to the precent capacity of the Canadian Hilk River Ganoly agreed upon as being $5 B O$ second-feet, during the months of Ajrin, Hay, June and July in aech year, subject to the rights of amporriation from tho Milk iniver within the territory of the United stater, as omisting at the date of the Canadion Co.'s appropriation on ililt Miver (23a 0at.,1902), and now belng fudicially deteranined by the couxts of Kontana.

That the nitural flow in the ${ }^{[1 i l l}$ River durine the months of April, lay, Juno and July in each year in ezcees of the amount of 330 second-feet. to ether wth the amount required as above of the amprowiations in the lowor valley, shall be divided oqually between the two countries."

The Hontans tributaries are not spocially mentionod in Mx King's momorandum but they novertheless are telcen into account under his scheme of alatribution and Danada's rights are dopendent upon the mount of water in the Hontana tributaries that can be applied to benofiolal use by the United states.

## Sr Horrelils first 道emorandum

On the 15 th Oatober, 1908 許 Nevell replited to Wering's proposal in which he uses the
followinc languago:
"The primary quertion which hes stinulated aqtion has been the domand of the oitimene of Montank that the waters of Milk Rivor, ineluding ite tributaries, shall not be diverted in Canada to their injury; and more than this, that the ayailable water supply shall bo increased, if possible, by local storage or by diversion of some of the stored whers of st warys River.

Mr Wowell in this memoranam further sqys: Whe principal feature of the plan of Wovamer 11,1905. (the Koot plan) is the equal division of the arailimble waters and he goes on to say that it is belioved that ary proposal to give Canade more than hale the wator camot be ontortained, although the detaile as to how this hale may be estimated are open to dscuscion.
H. Newell argues that ker King's proposition with reference to st Warys River is not Pair but concedos that Lry King's wronosal with reforenco to 1 Hk :iver is fair and desirable. Hr Hevell then makes the following counter proposal with reforance to st tharye Miver: That Canada take as a pricr appropriation 400 e.fos., the Unitod states to tare the next 400 foet, than Cands to take 200 or 400 c.iss. more and the Onited statos an equal amount until the avallabla flow is ebsorbea.

|  |  |
| :---: | :---: |
|  |  |
| Promosal | gropesal, shows the wide pariance between the proposals of the |
|  | partios asd suggests the disedvantage of doaling with |
| complicated cotails without a definite fundanental prinoipla to guide, and |  |
| manes the folloting sugestion: |  |
| atmple one, is that of equal diviston of water on the bountary streams |  |
|  |  |
| the watert. |  |

It is suggestad by the Whited statos that the language above quoted wes prectiealiy an acquiesoence by in Iting in the propoenl made by
 in fact FIF King's language intimates that there was a wide variance botwoen the parties and that no real proposal was belng made. He says as "his rejection (Mr Nevell's) totuches a vital point of the wrinciple of the proposal namely, the balanoing of conoessions by paymont in quantity of weter, reoonsideration of the whole proposel is nocescary". The propesal of $\mathbf{H}$ ring that it is argued is an acquionconce in the offer
 Miver water to the lower valloy of the gilic Rivor in tontana, and provides
 that were vital to time United States:

> Wr Hamol1's sepord Hemorandum

On the 29th December,1908, सr Hewoll replies to 14
Hing's liemorandum of the 23 rd of that month. in
Wewell quite readily adopts the principle of the
to use Hilk River through Canada an a canal for the conveyance of the gt Wary Rivar watows, and also for the right of prior apropriations a
 in wilk Rivor for the United statos. Hewoll's offer mith raference to prior appropriations sontained in trif momoxamdum is more pavourable to Ganda than the Treety and the proyialon for dmagea in oonwetion with the
 generous and satisfactory then those contatmed in the greaty. It is to be
 been ourried into tho wreaty there would he no doubt abort what waters are ombread in that dowmont. Mr Newell atates olaorly and in longage about whtch there aen be no wisteke, thet the waters to be divided are onity waters that flow across the bownary and the provisions for mesurgnant are such as to alow oleariy thet only waters flowing across the boundary are to be measured.

the United states to a prior approgriation of 360 second feet of the flow

The chamol of the Hint River in Guncda may be used at the conveniende of the United States for the conveyrace, while pescine theouch Canadian territory, of the whars of st Mary piver stored in the united Btates. The meotisions of Article 41 of this treaty shall apply to chay injury resulting to property in oanda from the componce through the Hikik aiver of the wraters from the st thary River:

The messument of the water so to be used by ach country shall from time to tine be made jointily by the groperiy constituted realanation oficicers of the United staten asd the properly constituted irrigetion officers of Cemada under the aireation of the International Joint Coximission of the United stotes and Canda,"

A draft was also produced sald to have been one made by har Anderson which reads ae follows:
"Artiolo VI. It is agrsed thet each country shall have the exclusive right to one-half the natural flow of the st bricy and Mily Rivers and their tributaries, the anorme thereot to be determined at the points of storage and alvasision and at tho boumary by masuremoats malie jofintiy by the properiy donstituted realamation snd irrigation officers on elther side of the boundery; and the chamel of 位ilit River in Canada may te used at the convenience of the tinited Etates for the opryeyonol, without intorforense, while pasaing through Conadian toryitory, of the waters of ether rivar stored in the United staten and constitutives any part of its ono-hali ginawe.

The peovisions of tritiole in of this tareaty shall apply to any infury resulting to wroperty in Omala from tha comveyanoe through the Milit Btyor of the waters belonging to the united states.

It is further agreed that there exists on the part of the thited statea the rigint to a prior spuropriation of 400 fleet of the natural flow of the witers of the hilli River during the irrigotion season betwean April 1 and segtamber 30, smmally, and that there axists during the aemo season a right on the part of Ganada to e trior appromiation of an aqual anount of
 poriod tbove miontioned such prifor appropriations chell not be stubject to reduction by the other country. ${ }^{\text {en }}$

A tolegram is also produced dated 0ttama, Jamuary 0,1909

Martiole 6: Say "Provinees of Alborte and Sablatchown"; change namo of the Conmiseion, leaving out the worls nof the United States ani Canadant. instead of "other rivers" say "the at warys hiver".

The oessity for this telagrem is apparent on raference to the Gibbons drait. In $\begin{aligned} & \text { (abons draft the wators in question are described }\end{aligned}$
 of alberta) and their tributaries". This languace was apoper description
 State and Province nawed, and the words mand their tributariosil clearly Peferred to ell the tributarles of these rivers moresoever situated. Evicontiy in radrapting the treaty with the object of improving the phrasodogy or for som other parpose, the worde "and their tributartes" were transposed so that the description of the waters in question read, "the 3t Mary and "ilk Rivers snd the tre tributaries in the state of Moxtana and the Province of A 2 berta". Thia languege thon beonme ineorreot beanase some of the tributaries of the ding River are situated in the Province of gascatchoran and in ordar that the treaty should hamonize with the araft and cover the same waters as that corored by the draxt. it was necessary to ada the words "and saskatchewan" mentioned in Lir Giboons's telegram. The mords "ting st Tary and Milu Rivers (in the state of lontano and the Provinoe of Albertal" used in the original aibbons draft, ead the words
 and the Frovinces of Alborta and Sagmohewan]" men identically the same thing. The tresty describes in dfferent words the same waters described by the draft. It aesas clear that ir Gibbons only intended by his telegram to maks rerbal chanes and it id not reasonablo to sugsest that without any
request irom the United States and whont any discueston on the subjeot, Hir Gibbons would seok to bring within the whers covered by the reaty and ohargeable to Cancan, the Somimtohowan tributaries of the Milk kiver. This would be the more milualy wen we take inte consideration the fact that the maters of the Sasketchowan twibutariea of the Hilk River oxceed In quatity at the intarnational boundary the paters of the min $\begin{aligned} & \text { mitu }\end{aligned}$ Rater by fituty per cent.

Tho view of the Conadian Section at to the natural snd proper meaning of the Article hat already bean set forth and it is aumentted that instoad of the documents above revteved showing that that interpretation is not correct. they faraish strong oomroborative ovidenoe to the oontrary.
 treaty contains languge that aptiy amd clearly degcribes the waters elowing buross the boundary, and that too in language similer to that used in tho Treaty and in the negotiations to denaribe waters of this charweter. It seas ino onoeivable that the nogotiators would abandon the use of language cloar and unmistaloble for langrage adnittediy ambiguous and obscure to expross tho intention of tha Unitod States unless it was the deliborate intention of the notiators to rever to waters of an entipely
 draft belng evidence that the wators oovered by the Treaty are oniy thase rlovine across tho boundery. it is ovidence to the controry and indicates that Mr Rewell's preposition in which he cloarly limats the waters to be brought under the jurisdiotion of the commisaion ves rejected and a proposition to bubrece all the waters of the two river systeme adopted.
