
INTERNATIONAL RAINY LAKE BOARD OF CONTROL (IRLBC)

INTERNATIONAL RAINY RIVER WATER POLLUTION BOARD (IRRWPB)

NEWSLETTER

1st Quarter 2012

This newsletter provides a summary of the activities of the International Rainy Lake Board of Control (IRLBC) and the International Rainy River Water Pollution Board (IRRWPB) during the 1st quarter (January through March) of 2012.

Basin Conditions and Regulation

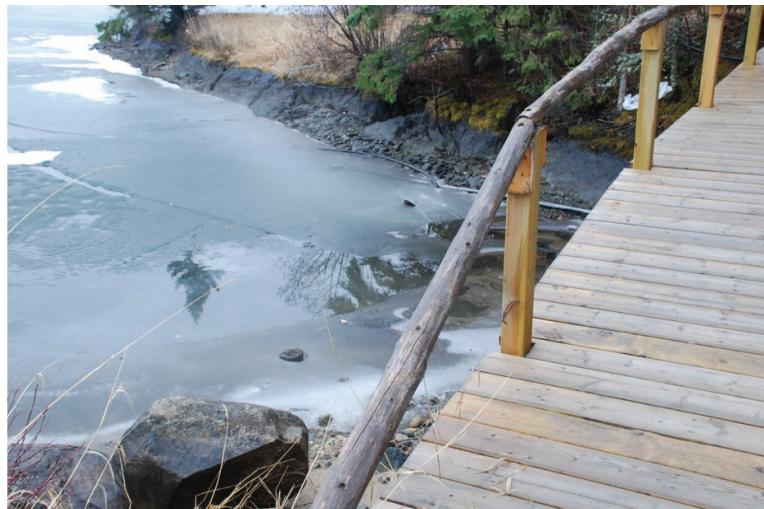

Inflow to Rainy Lake and Namakan Lake was near 10th percentile for the first two months of the year, continuing a period of low inflow that began the previous summer. The U.S. Drought Monitor classified the entire portion of the basin within Minnesota as undergoing moderate to severe drought conditions during this period.

Namakan Lake level declined near the mid-point of the IJC's Rule Curve band from the beginning of January until mid-March, despite near minimum outflows for this period. Early, very warm, freshet conditions in the second week of March brought about a rise in the lake level through the rest of the month. At the end of March, Namakan Lake was at 88% of the Rule Curve band, 10 cm (4 in) below the Upper Rule Curve.

Rainy Lake level at the beginning of 2012 was 15 cm (6 in) below the Lower Rule Curve. With the minimum outflow and the declining rule curve through this period, the lake re-entered the Rule Curve band in the third week of February. As with Namakan Lake, the second week of March brought early freshet conditions. This led the level of the lake to rise above the Upper Rule Curve level at the end of March (the minimum elevation for the Rule Curve band occurs on March 31).

Board Meetings and Activities

The Boards held a joint conference call on January 20th with the project management team for the Plan of Study in support of the upcoming review of the 2000 Rule Curves. Topics covered included progress in ongoing studies and prioritization of future studies related to the review.

Several Board members/ advisors attended the 9th annual Lake of the Woods Water Quality Forum in International Falls, March 7-8. The forum gathers resource managers, policy makers, and researchers with a common interest in water-related issues in the Lake of the Woods and Rainy River watershed. IRLBC member Lee Grim was presented with the Larry Kallemyen Award in recognition of his professional achievement in resource management and contributions to research in the basin.

Another joint conference call was convened on March 19th to consider several projects for funding proposals, as well as to plan for the April appearance before the IJC at the semi-annual meeting in Washington, D.C.

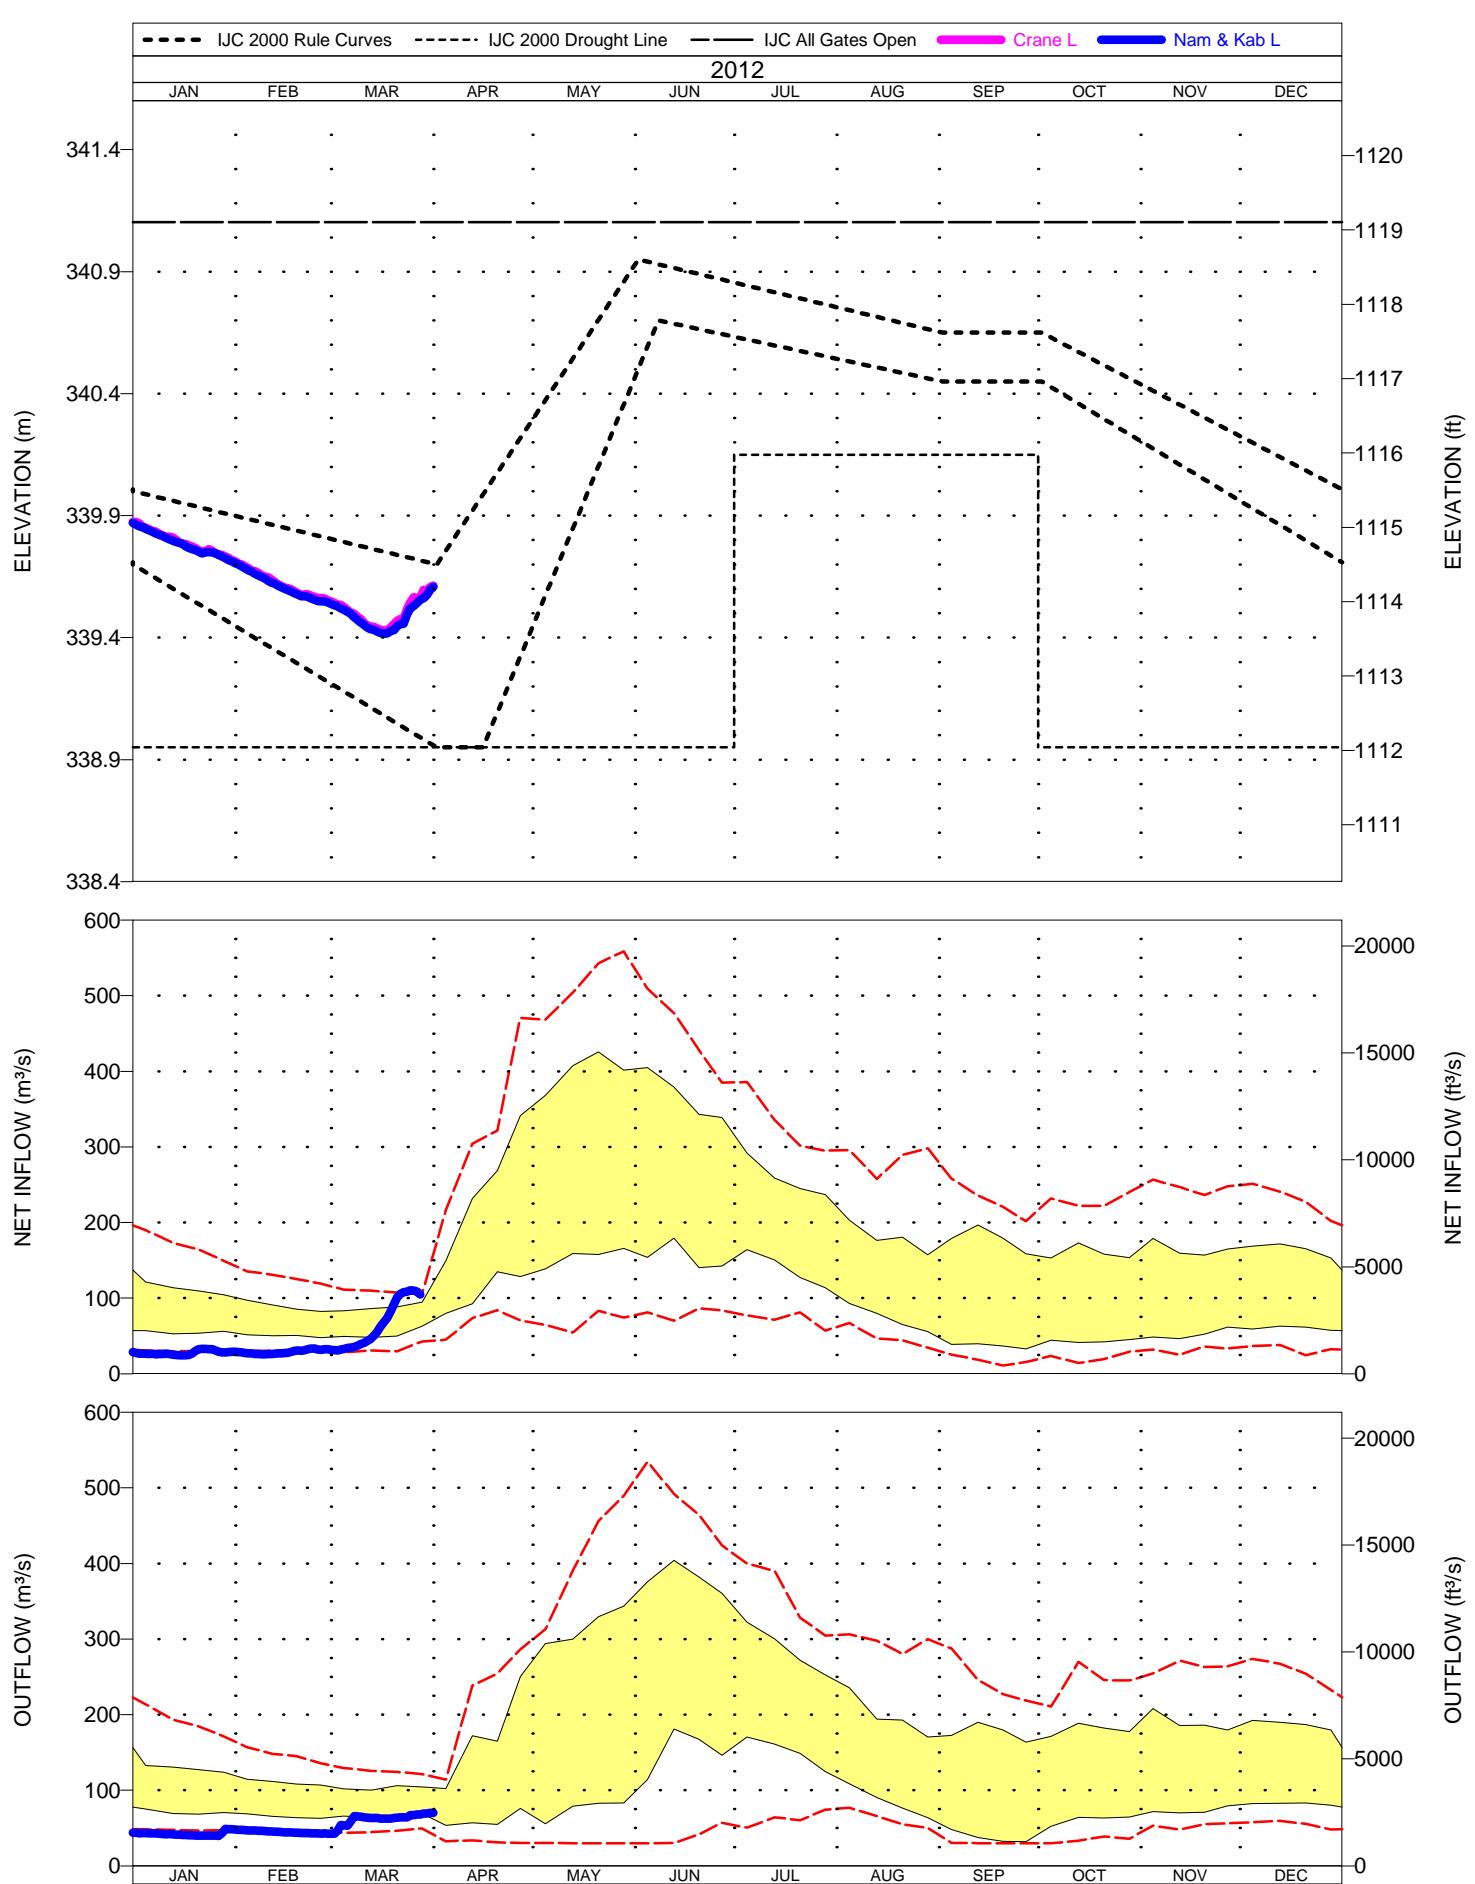

GIS Map Data Harmonization in the Rainy River Basin

The IJCs Trans-boundary Hydrographic Data Harmonization Task Force held a data harmonization workshop in Saint Paul, MN from February 27th to March 1 with GIS professionals from Canada and the US. The goal of this workshop was to harmonize GIS hydrographic information for the Rainy River basin across the Canada-US border. Currently most GIS based hydrological maps stop at the international boundary. Having this seamless trans-boundary hydrological map data will allow for better modelling of water levels and flows and the effects of the 2000 rule curves.

More information on the Canada-US data harmonization efforts of the IJC can be found here: http://www.ijc.org/rel/boards/watershed/Canada-US_Hydro_Harmonization_e.pdf

Implementation of IJC 2000 Rule Curve Assessment Workgroup Recommended Studies

Project managers from Voyageurs National Park continue to work with the Rainy Boards to implement studies which will provide information for the 2015 review of the 2000 rule curves. The Boards approved studies on mussel diversity in the Rainy River, modelling of the hydrology of the Rainy River levels and flows from pre-dam and pre-2000 rule curve conditions, and a study to develop a reservoir hydrologic model for Rainy Lake and the Namakan Reservoir to help evaluate hydrodynamic changes of the reservoirs due to the 2000 rule curves. These local projects and others in support of the rule curve review are being funded by the IJC's International Watershed Initiative.

RAINY LAKE

LEGEND - LEVEL AND FLOW GRAPHS

WATER LEVELS AND FLOWS

Actual Data

Actual data for the dates shown
- levels are 1-day means plotted daily
- inflows are 7-day means plotted daily
- outflows are daily values

Rule Curves (Namakan & Rainy Lakes)

IJC Upper & Lower Rule Curves

IJC 2000 Drought Line

IJC "All Gates Open" Level

Statistical Data

Level/flow has been above this line 10% of time

Normal level/flow range:
Level/flow has been above this range 25% of time
Level/flow has been within this range 50% of time
Level/flow has been below this range 25% of time

Level/flow has been below this line 10% of time

All statistical levels are based on 3-day means at month quarter points.

All statistical flows are based on quarter-monthly means.

Period of record for all percent data is 1976-2005.

Datums for water levels are:

- | | |
|----------------|-------------------------------------|
